

KIMinder360 Mobile App

Automated Situational Awareness Training

Team: Dylan Hyer, Nyle Huntley, Cole Bishop, Mayanna John
Client: Morgan Boatman, Winter Communications LLC

Team Mentor:
Md Nazmul Hossain

Background

- Keen attentiveness to your immediate surroundings, or **situational awareness**, is the single most important factor to your survival.
- Modern distractions like smartphones dull your situational awareness skills.
- There are currently no systematic, reliable, or engaging methods that exist for teaching or honing this critical skill.

Problem

- Our client’s original KIMinder360 program required manual, time consuming phone calls to deliver directives to clients.
- Training was inaccessible and not easily scalable, so the reach was limited.
- Clients lacked any customization for training.

Solution

The KIMinder360 mobile app delivers our client’s proven situational awareness training program in a format that fits modern life. By automating delivery and bringing the program onto a mobile platform, the app supports regular, personalized practice that builds lasting habits. It also transforms the phone into a tool that places awareness training at the forefront of users’ attention.

Situational Awareness Will Save Your Life!

 KIMINDER360 45m ago

Estimate how far you can walk before sunset. Tell someone.

 KIMINDER360 16m ago

In a crowded room, count the hands you can see of the people around you.

 KIMINDER360 3m ago

Without looking, identify and describe three objects or people behind you.

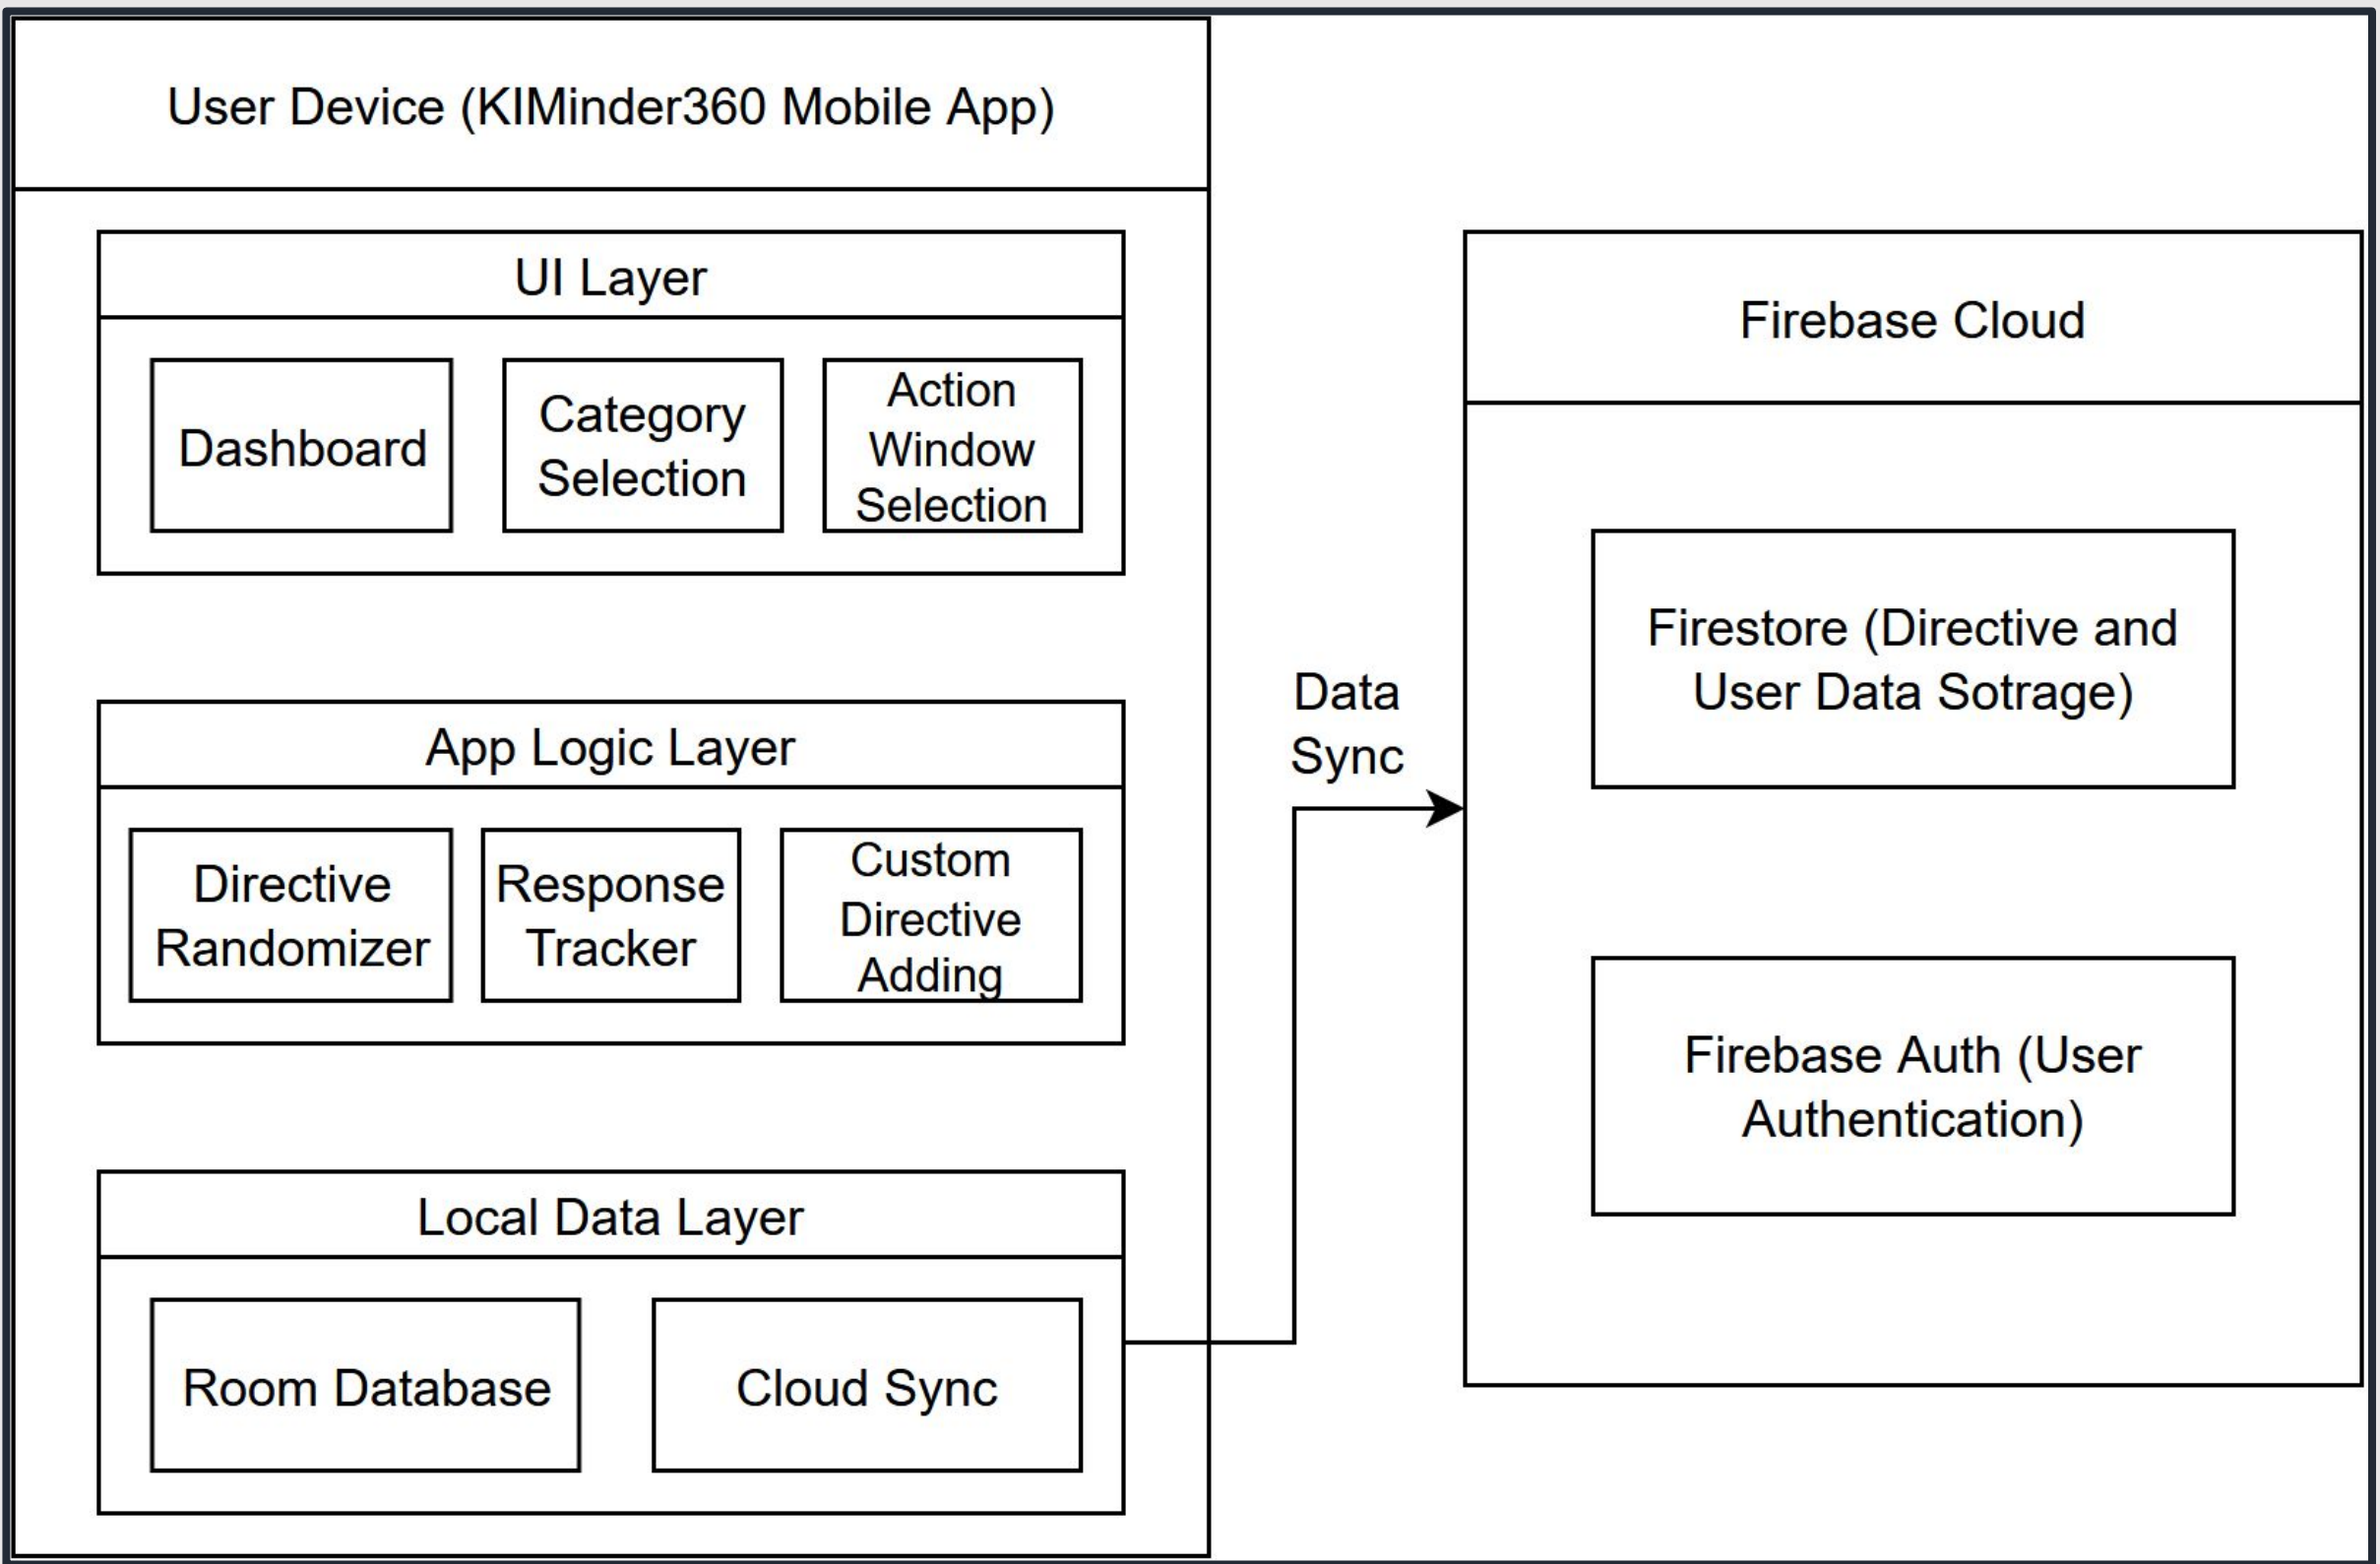

Examples of directives as push notifications

Key Features

-  **Push notifications** to deliver directives
-  **Randomized directives and timings** to keep training fresh and less predictable.
-  **User-defined “action windows”** or time periods for directives to be sent.
-  **Flexible directive categories** for more specific situational awareness practice.

Architecture

Technologies

- Android Studio:** Official development environment for Android applications.
- Room Database:** Local data persistence native to Android Studio.
- Firebase Cloud:** Cloud database platform for online functionality.
