

CS Capstone Design

Product Demonstration Grading Sheet (100 pts)

TEAM: KIMinder360 Team

PROJECT: KIMinder360 Mobile App

DEVELOPMENT CYCLE: ☐ Alpha Demo I ☒ Alpha Demo II ☐ Acceptance Demo

DATE: 3/20/2026

MENTOR: Nazmul Hossain

CLIENT: Morgan Boatman

1. Overview

The purpose of the Product Demonstration Flight Plan is to define what functionality is planned, what functionality will be demonstrated in the current development cycle, and how success will be evaluated.

This document serves three roles:

1. A **planning artifact**, showing how the full product scope is distributed across development cycles
2. A **demonstration guide**, outlining how the current cycle's functionality will be presented through realistic user flows
3. An **evaluation aid**, defining acceptance criteria used by the mentor and client to assess completeness and correctness

The Flight Plan is prepared by the team, reviewed and approved by the mentor, and used during the live demonstration for evaluation and feedback.

2. Product Scope and Development Cycles Overview

This section presents the full set of user stories or use cases for the product and how they are distributed across the three development cycles. The intent is to make clear:

- What functionality exists in the overall product, corresponding to your full prioritized list of functional requirements
- What is included in each development cycle
- How incremental delivery builds toward the final system

2.1. Backlog Overview by Development Cycle

Alpha Demo I – Previous Cycle

ID	User Story / Use Case	Acceptance Criteria (Summary)
US-1	As a user, I want to select active hours so that I can receive directives when I'm able to complete them	Active hours configurable per day, saved, active/inactive status shown on home page based on current time
US-2	As a user, I want to select different categories of directives to keep my training relevant and engaging	Categories selectable, saved, only selected categories marked active
US-3	As a user, I want to receive directives through push notifications so that I can practice situational awareness throughout my day	Notifications sent only during active hours, directives limited to selected categories
US-4	As a user, I want directives to be randomized so training remains fresh and engaging	Notification sent with directive, chosen randomly from active categories

US-5	As a user, I want directives to be sent at random times within my active hours so training is spontaneous unpredictable	Notification sent with directive, sent at random point within active hours
US-6	As a user, I want to see a list of my most recent directives so I can track my training progress	Recent directives tracked in database, visible on home screen with date sent
US-7	As a user, I want to be able to mark directives as complete so I can keep myself accountable	Directives can be marked complete or incomplete, interaction level based on settings, response saved and shown in recent directives list
US-8	As someone with a schedule that fluctuates, I want to be able to change how much I need to interact with directives depending on if I have a busy day or a relaxed day	Interaction level selectable, response requirements enforced based on selection
US-9	As someone with different free time throughout the week, I want to be able to increase or decrease directive frequency based on my schedule	Directive sending frequency configurable, settings measurably affect real frequency of directive sending

Alpha Demo II - Current Cycle

ID	User Story / Use Case	Acceptance Criteria (Summary)
US-10	As a user, I want to change the visual style of my app from light to dark mode and other fun themes.	Users can switch their app theme from light to dark via the settings menu.
US-11	As a user, I want to be able to read about the purpose of KIMinder360 so that I can start using the app effectively.	Users are shown an introduction page upon first boot and can access the intro page to get information about KIMinder360 at any time by clicking the top left button.
US-12	As a user, I want to be able to manually delete individual recent directives to have control over my data management.	Users can delete a recent directive entry from the response screen with a clearly labeled button.
US-13	As a user, I want to be able to set my recent directives to automatically delete after a certain number of days so that my storage usage is kept low automatically..	Users can set their recent directives to automatically delete after X number of days in the settings menu.
US-14	As a user, I want to view my total directive history so that I can review my progress.	Users can view their lifetime directive history by clicking "View All" on the home screen.
US-15	As a user, I want to create my own directives so that I can personalize my experience and focus on training goals that are meaningful to me.	Users can create custom directives that are stored locally on the device and included in notification selection which they can manage (Edit and Delete).
US-16	As a user, I want to be able to share directives with my friends if they are interesting or fun.	Users can share directives and their responses via text through the response screen for directives
US-17	As a new user, I want directives to be random and without duplicates when possible.	No repeated directives sent or viewed within 5 other directives minimum

Acceptance Demo - Planned Scope

ID	User Story / Use Case	Acceptance Criteria (Summary)
US-	As a user, I want to be able to postpone directives that are sent to me in case I am too busy to do them at that moment.	Directive can be skipped or delayed, delayed directives are resent at later selected time

US-	As a user, I want to be able to change the difficulty level of my directives so that I can have an experience that lets me grow my skills and challenge myself	Difficulty level selectable, directives filtered by selected difficulty
US-	As someone who travels a lot, I want directives to adapt to my current location so that I can connect with other users around me and explore the new locations I visit	Specific directives triggered by location, sent only when location conditions are met
US-	As someone who plays a lot of games, I want directives that span multiple parts or steps so that I can engage in progressive challenges similar to quests in games	Directives contain multiple steps, progress tracked, completion requires all parts
US-	As a user, I want to view and compare my directive completion progress on a leaderboard so that I can be motivated by others to complete my directives	Leaderboard displays user progress rankings, updates based on completed directives
US-	As an admin, I want to be able to add and update directives and categories for future app expansion	Directives and categories addable by admin users, included in app updates, accessible to users after update

3. Demonstration Walkthrough

For each user story or use case included in the current cycle, provide a demonstration walkthrough guided by acceptance criteria. The demo should follow a realistic user flow and show the functionality working end-to-end.

User Story 1: US-10 - As a user, I want to change the visual style of my app from light to dark mode and other fun themes.

User Role: User concerned with customizing the visuals of their experience

Goal: Personalize the app's appearance by switching between light mode, dark mode, and other available themes

Demonstration flow:

1. User starts on the home screen
2. User taps the Settings button
3. User navigates to the Theme dropdown menu section
4. User selects a different theme (Light, Dark, or an additional theme)
5. System immediately updates the app's visual style across all screens

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. User can access theme settings from the Settings menu
2. Theme options (Light, Dark, and any additional themes) are visible
3. Selecting a theme updates the UI instantly
4. Selected theme persists after closing and reopening the app

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality
- Other evaluative comments/notes

User Story 2: US-11 - As a user, I want to be able to read about the purpose of KIMinder360 so that I can start using the app effectively

User Role: New or returning user learning how the app works

Goal: Understand the purpose and functionality of KIMinder360 at any time

Demonstration flow:

1. User launches the app for the first time
2. System displays the introduction page automatically
3. User reads the overview information
4. User proceeds to the home screen
5. Later, user taps the top-left info button
6. System reopens the introduction page with the app description

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. Introduction page appears on first boot
2. Introduction page clearly explains the purpose of KIMinder360
3. Top-left button allows access to the introduction page at any time
4. Introduction page loads correctly without errors
5. Introduction page does NOT open automatically after first boot

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality

- Other evaluative comments/notes

User Story 3: US-12 - As a user, I want to be able to manually delete individual recent directives to have control over my data management

User Role: Active user managing personal directive data

Goal: Remove specific recent directives individually when they are no longer needed

Demonstration flow:

1. User opens the app and navigates to the list of Recent Directives
2. User accesses the response screen of a specific directive
3. User taps the delete button on a specific directive entry
4. System removes the selected directive from the list
5. Updated list is displayed without the deleted directive

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. Each recent directive entry includes a clearly labeled delete button
2. Only the selected directive is removed when delete is pressed
3. The UI updates immediately after deletion
4. Deleted directives do not reappear after restarting the app

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality

- Other evaluative comments/notes

User Story 4: US-13 - As a user, I want to set my recent directives to automatically delete after a certain number of days so that my storage usage is kept low automatically

User Role: Active user managing storage and data usage

Goal: Automatically remove old directives after a user-defined number of days

Demonstration flow:

1. User opens the app and navigates to the Settings menu
2. User turns on the Auto-Delete option
3. User chooses a timeframe (7, 14, or 30 days)
4. User saves the setting
5. System automatically deletes directives older than the selected number of days

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. Auto-delete option is available in the Settings menu
2. User can select a specific number of days for deletion
3. Directives older than the selected timeframe are automatically removed
4. Auto-delete preference is saved and persists between app sessions

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality

- Other evaluative comments/notes

User Story 5: US-14 - As a user, I want to view my total directive history so that I can review my progress

User Role: Active user tracking long-term progress

Goal: Access a complete history of all directives given to the user

Demonstration flow:

1. User starts on the home screen
2. User taps the "View All" button
3. System navigates to the full directive history screen
4. User scrolls through and reviews past directives

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. "View All" button is visible on the home screen
2. Tapping "View All" opens the full directive history page
3. All stored directives are displayed in a clear list
4. History loads correctly and persists after app restarts

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality
- Other evaluative comments/notes

User Story 6: US-15 - As a user, I want to create my own directives so that I can personalize my experience and focus on training goals that are meaningful to me

User Role: Active user personalizing training content

Goal: Create, edit, and manage custom directives stored locally on the device

Demonstration flow:

1. User navigates to the Custom Directives section
2. User taps the "Create Directive" button
3. User enters directive details and saves the directive
4. System stores the directive locally and adds it to the directive pool
5. User edits or deletes the custom directive from the management screen

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. User can create and save custom directives locally
2. Custom directives appear in the selectable directive pool/notifications
3. User can edit existing custom directives
4. User can delete custom directives
5. Custom directives persist after the app is closed and reopened

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality
- Other evaluative comments/notes

User Story 7: US-16 - As a user, I want to be able to share directives with my friends if they are interesting or fun.

User Role: Active user sharing directives with friends

Goal: Share a directive and/or personal response via text message automatically generated by the app

Demonstration flow:

1. User receives or opens a directive
2. User completes the directive and submits a response (if applicable)
3. User navigates to the directive response screen
4. User taps the "Share Directive" button
5. System opens the device's native sharing screen
6. Directive content and user's response are pre-populated in the message body to be copied or shared

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. "Share Directive" button is visible on directive response screen
2. Pressing button opens device's native sharing screen
3. The directive content and user's response (if applicable) are included in the message
4. User can successfully share the message via chosen messaging app

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality
- Other evaluative comments/notes

User Story 9: US-17 - As a new user, I want directives to be random and without duplicates when possible.

User Role: Active user receiving directives frequently, or user that has very few categories selected

Goal: Receive randomized directives without seeing repeats within a short sequence

Demonstration flow:

1. User selects categories
2. System sends several additional directives sequentially
3. User views at least 6 directives total
4. System ensures that no directive is repeated within the previous five directives
5. User reviews directive history to confirm lack of repetition

Acceptance Criteria (What Success Looks Like)

The demonstration is considered successful if:

1. Directives are selected randomly from the pool of active categories
2. No directive is repeated within five previously viewed directives
3. Directive history accurately reflects the order sent
4. Original randomization behavior (no duplicate prevention) persists for categories with only 5 or fewer directives

Evaluation and Comments (for mentors only):

- Convincingly demonstrated the functionality
- Other evaluative comments/notes

4. Out-of-Scope or Deferred Functionality

List any user stories or use cases planned in the approved flight plan for this cycle, but not demonstrated, along with their planned future cycle. This helps set clear expectations and avoids confusion during the demo.

Alpha Demo I – Current Cycle

ID	Reason Not Demonstrated	Planned Cycle
N/A		

5. Known Limitations and Planned Follow-Up

Document any known limitations (if any), partial implementations, or issues observed during development or demonstration. Where possible, indicate planned mitigation or timing for resolution.

- Limitation / Issue:
- Impact:
- Planned Resolution (if known):

6. Approval

This Flight Plan has been reviewed and approved for use in the Alpha Demonstration.
