Problem Statement

- Situational awareness is at an all time low
- People are less prepared for emergencies
- Our client has created awareness training in the past
- Poor scalability due to manual implementation

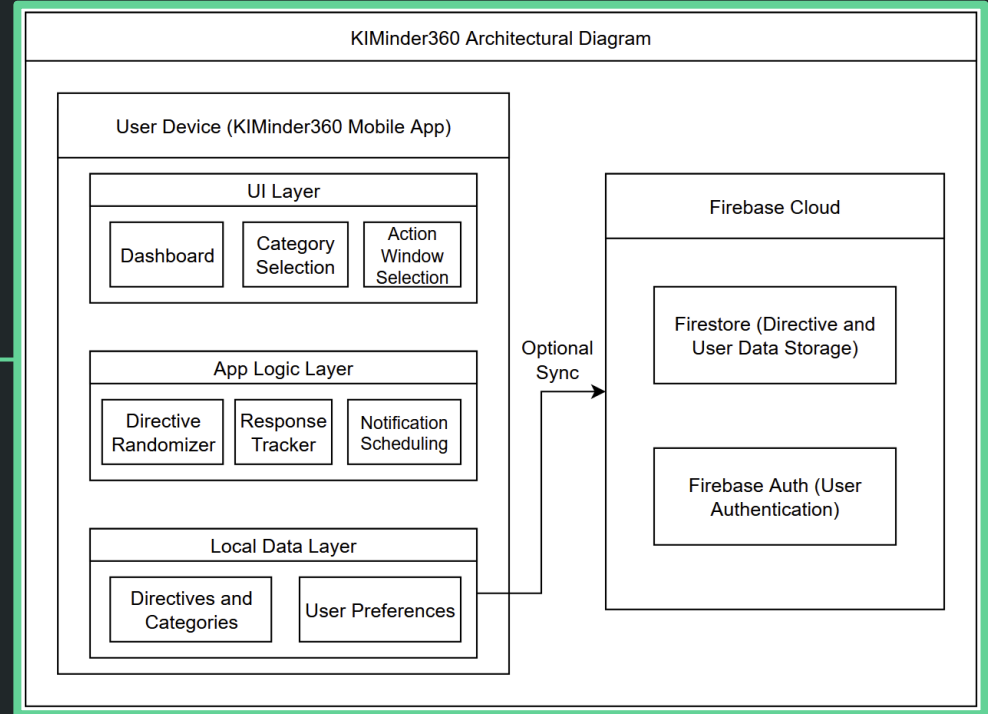

Solution: KIMinder360

- Mobile app that automates awareness training
- Allows for seamless scaling to many users
- Easier for everyday people to start awareness training

Software Design Overview

- Layered architecture
- Offline-first local storage
- Firebase for auth/data
- Optional cloud sync

Testing Plan

- Unit Testing

- Check core logic

- Integration Testing

- WorkManager ↔ DB
- DB ↔ UI
- UI ↔ Notifications

- Usability Testing

- Settings, notifications, directive responses

- Continuous testing

- Unit → ongoing
- Integration → before demos
- Usability → before acceptance

- Run on devices & emus

- Fix severe issues first

- Use results & client feedback

Alpha Demonstration 2

1. Better App Usability
2. Custom Directive Creation
3. Backend Logic Improvements

About KIMinder360

Welcome to KIMinder360! Keen attentiveness to your immediate surroundings, or situational awareness, is the single most important factor to your survival. KIMinder360 trains your situational awareness skills by challenging you with short tasks called directives throughout the day. Now lets get you started with the basics!

Directives:

Directives are short tasks that challenge your situational awareness and preparedness skills. They can range from identifying objects behind you to planning for survival situations.

Active Hours:

From the homescreen you can customize an active hour window for each day. Active hours are the times that we will send you directives. This way you can decide when you want to train and when you don't.

Categories:

Think of categories as sets of directives that all pertain to a specific type of training like spacial awareness or conceptual problem solving/brain teasers. You can view the list of categories from the home screen and turn on or off individual categories so you are only training the skills you want to.

Disclaimer:

You are responsible for your own actions and the safety of yourself and others while carrying out directives from

Start Training!

Challenges and Resolutions

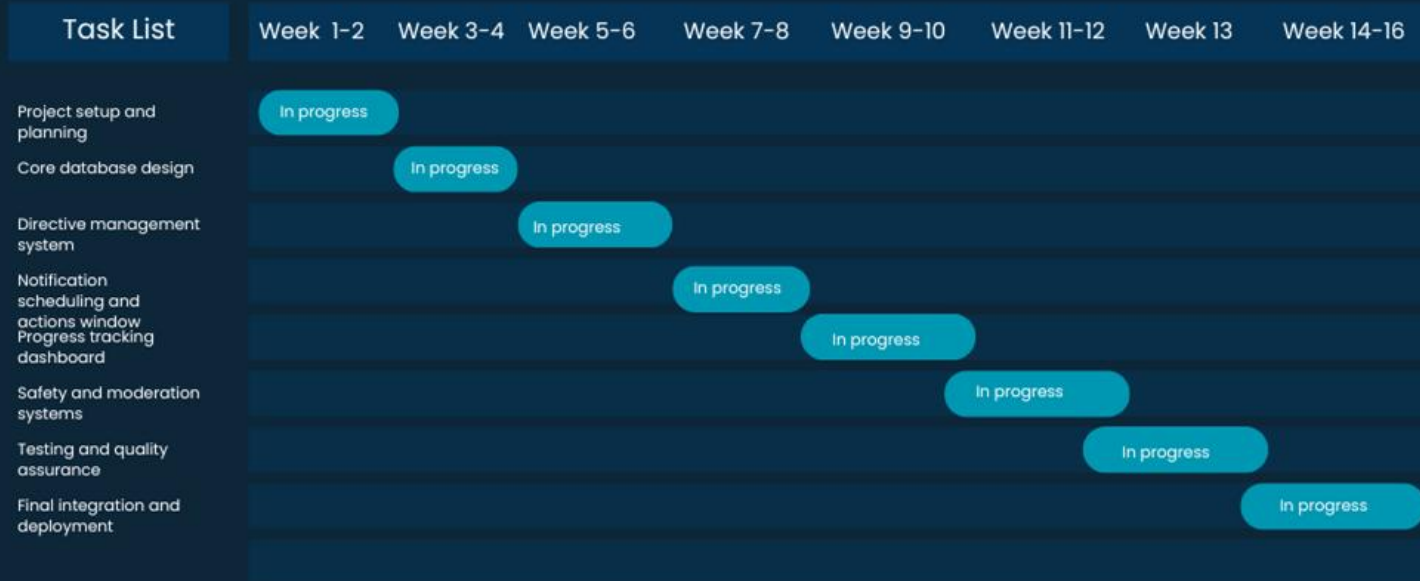

- Getting the app on our client's phone
- Trying to do theming and UI design
- Unit testing

- Met up in person to get him a demo
- We tried out different looks and got better
- Research and implementation

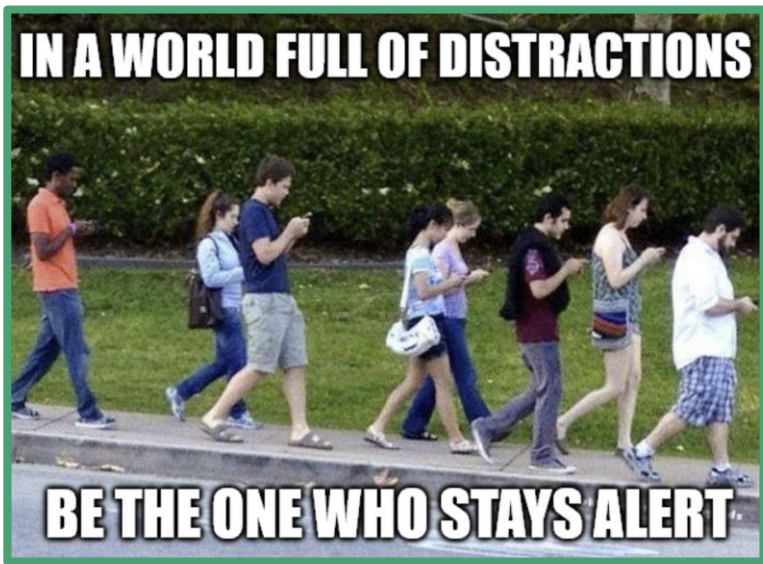

Schedule

Gantt Chart

Project Timeline
Spring 2026

Conclusion

- Fixed scalability problem with mobile app implementation
- Reduced workload on our client
- Made awareness training more accessible
- Will continue to add to our feature set

Thank You!
