KIMinder360 Mobile App

Background

- Keen attentiveness to your immediate surroundings, or **situational awareness**, is the single most important factor to your survival.
- Modern distractions like smartphones dull your situational awareness skills.
- There are currently no systematic, reliable, or engaging methods that exist for teaching or honing this critical skill.

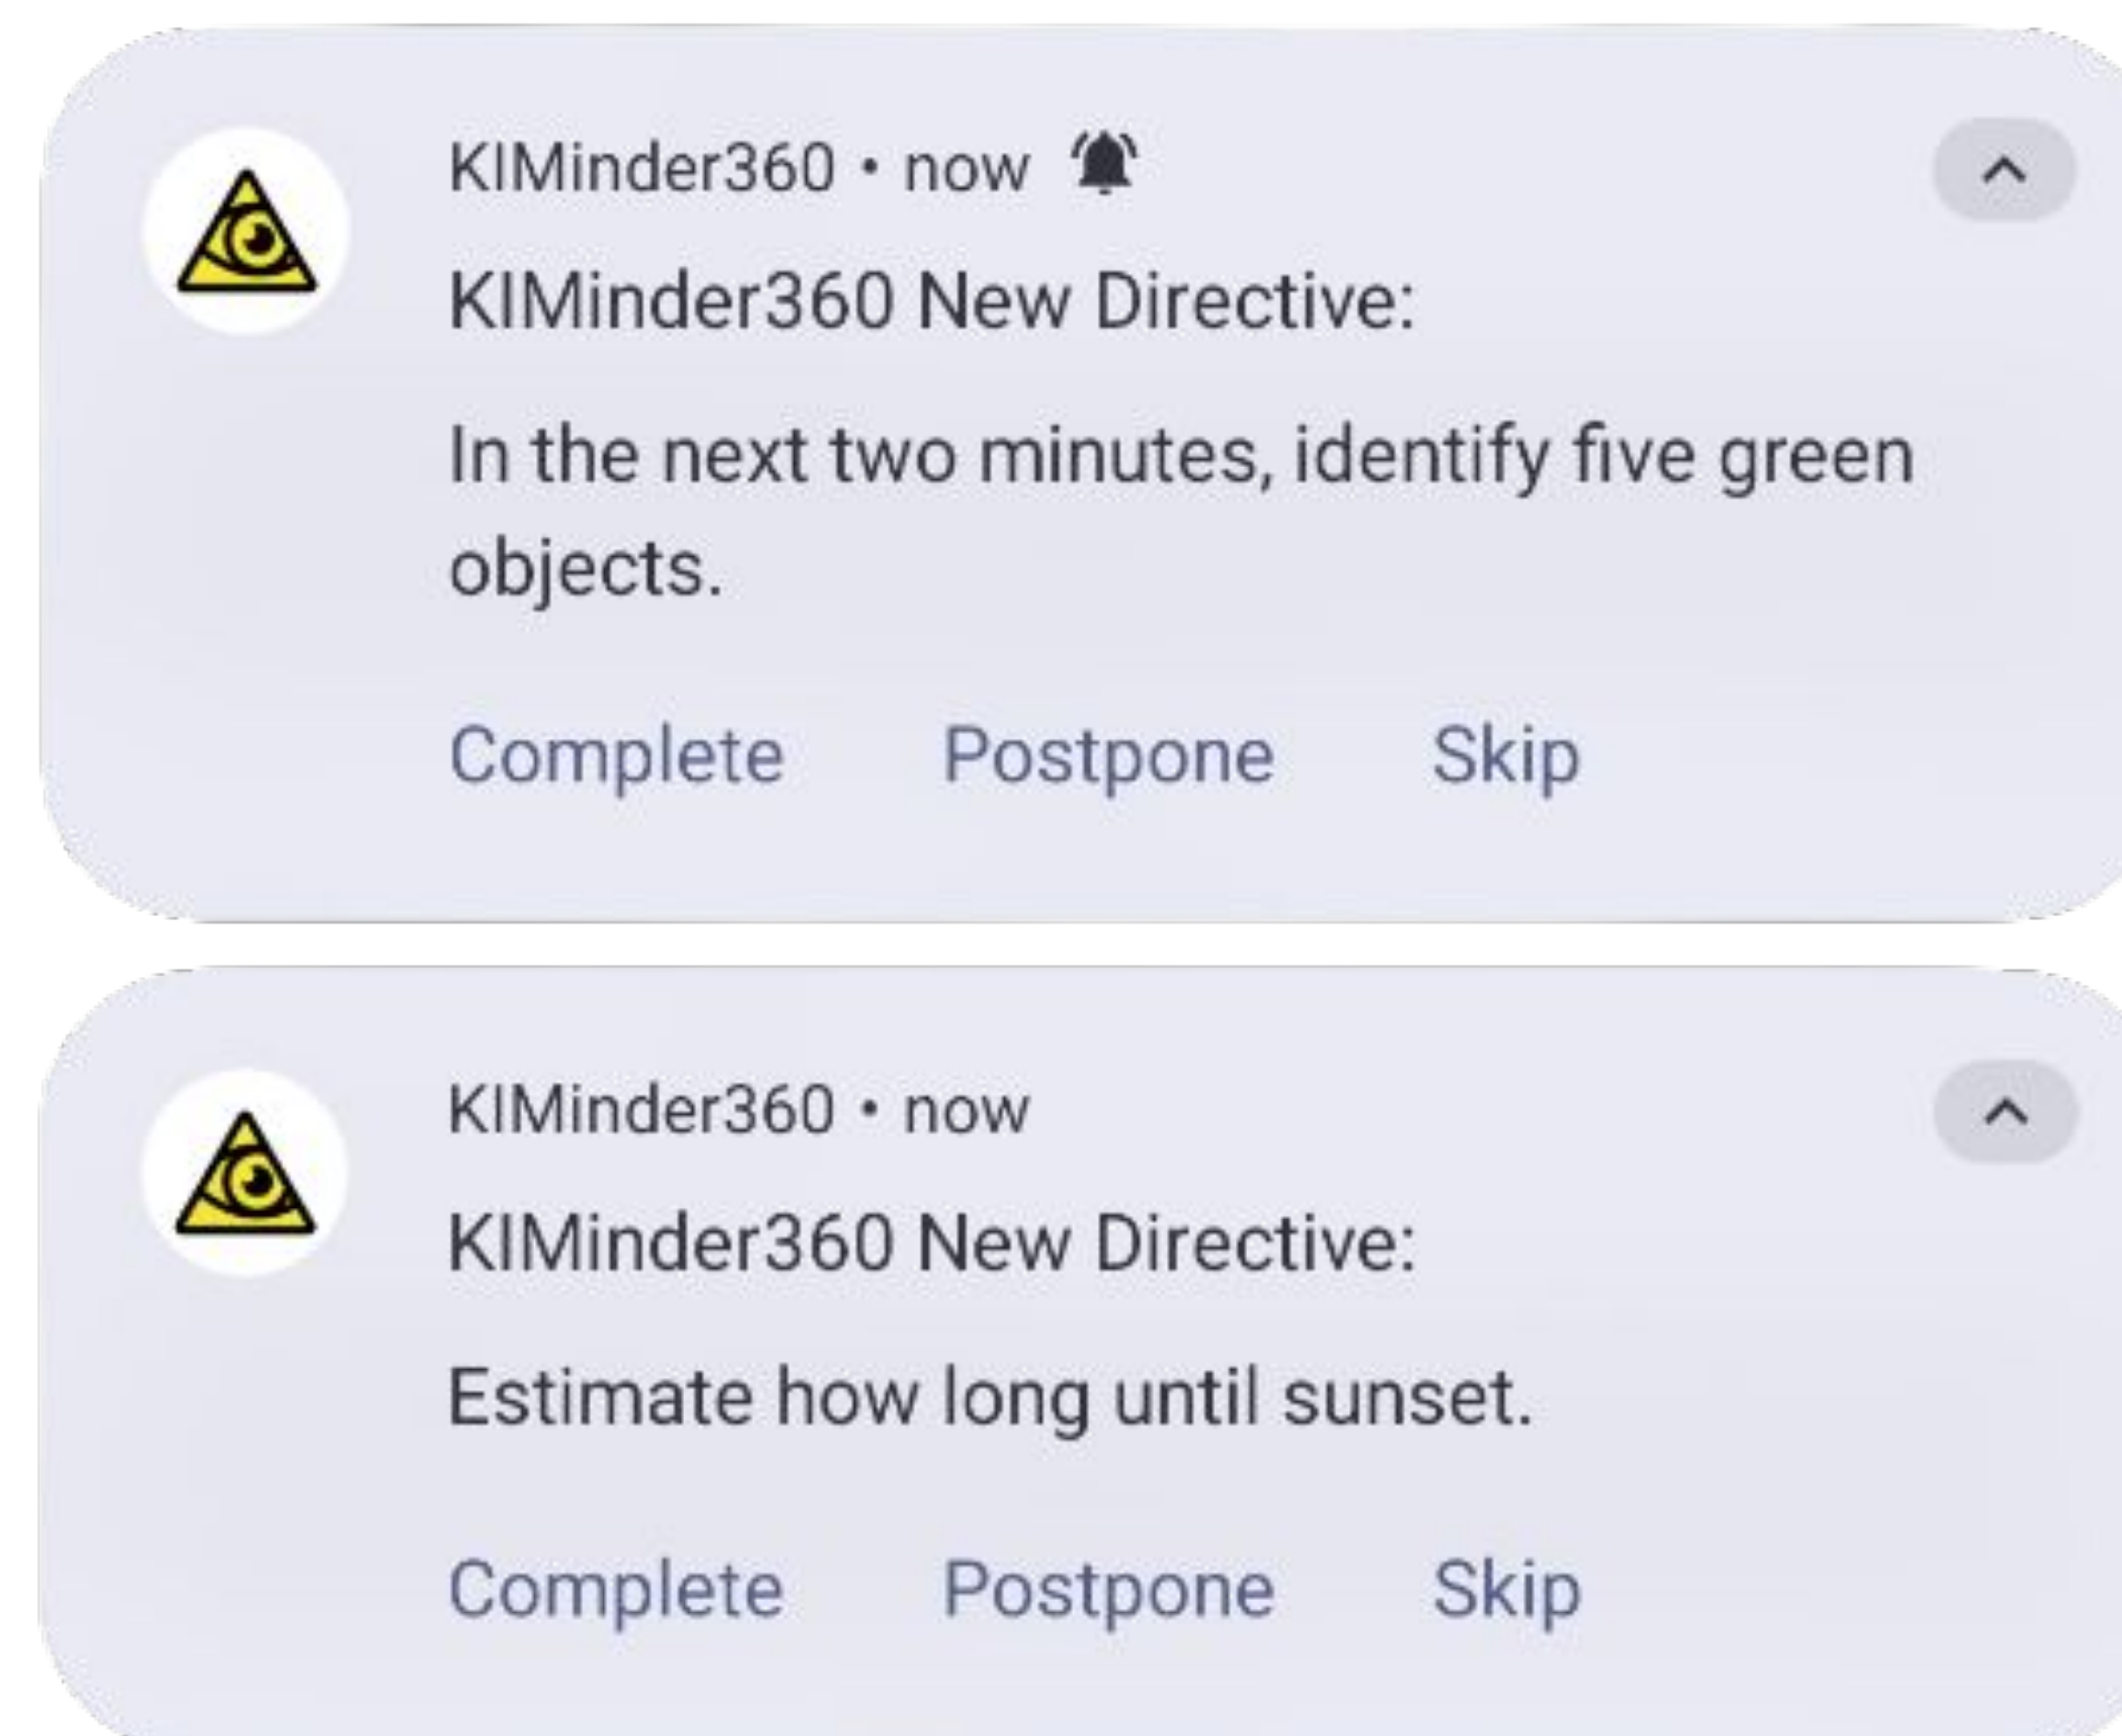

Problem

- Our client's original KIMinder360 program required manual, time consuming phone calls to deliver directives to clients.
- Training was inaccessible and not easily scalable, so the reach was limited.
- Clients lacked any customization for training.

Solution

- Delivers a proven awareness training program in a mobile format.
- Automates directive delivery for consistent and convenient use.
- Helps build lasting awareness habits over time.
- Transforms the phone into a tool that keeps awareness training front and center.

Situational Awareness Will Save Your Life!

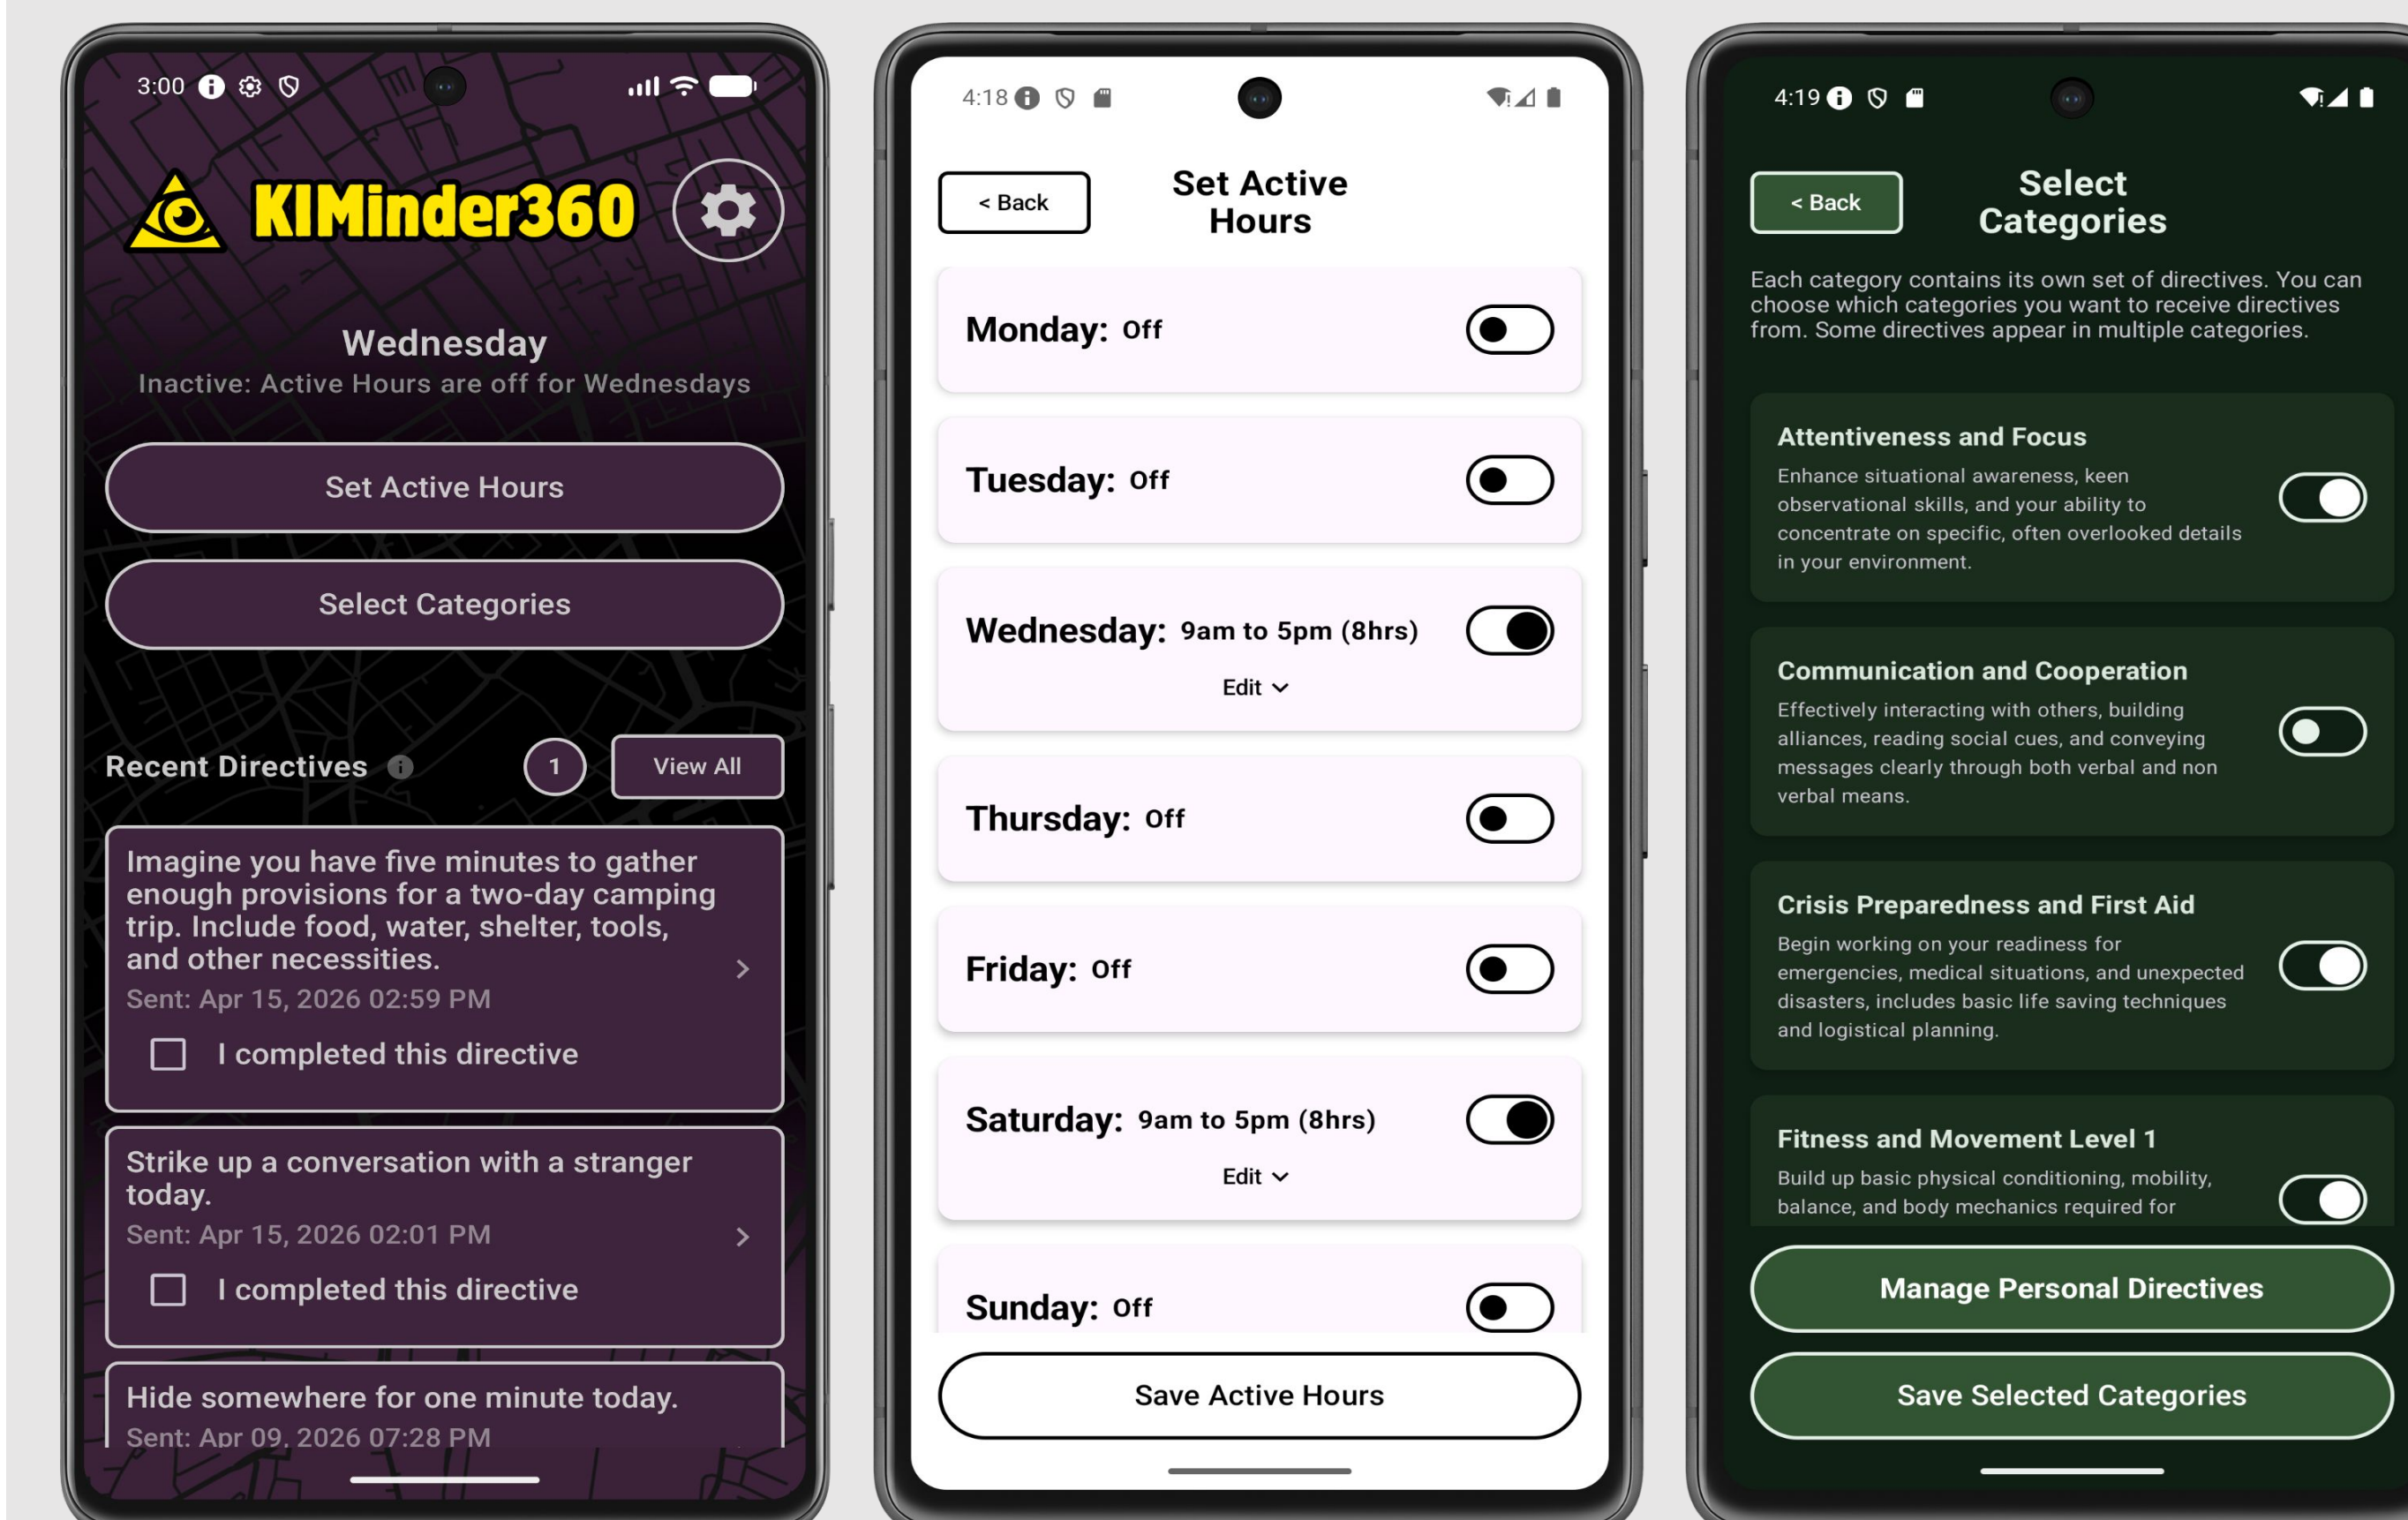

Examples of directive push notifications

Key Features

- Push notifications**
- Randomized directives and timings**
- User-defined “Active Hours”**
- Flexible directive categories**

App screenshots: home screen, active hours, categories

Technologies & Future Work

KIMinder360 was developed with **Android Studio**.

Future work will include introducing cloud database functionality for new content on **Firestore** and bringing the app to iOS using **Kotlin Multiplatform**.

Outcomes

Before	After
Training process managed manually	Automated training process
Limited outreach	Broader outreach
